## Abstract of JP 10032669 (A)

**PROBLEM TO BE SOLVED:** To instruct a required operation for desired image processing without mistake by freely switching display data of an operation section into display data of the operation section in a desired language or a desired level.

**SOLUTION:** When a changeover object of an operation section display resource displayed on a display section 301 is designated by a language designation key, a 2nd operation section display resource based on the designated changeover object is acquired through communication with a host computer 900 and a 1st operation section display resource stored in a flush memory 502 based on the acquired 2nd operation section display resource is rewritten.
